

How to install new license key

From your email program (Microsoft Outlook used in this example) **Right** click on the attachment. From the drop down menu left click on Save As. A new window will open. Navigate to find the folder C:\Axcys\Data. Once you have clicked on the target folder (Data) click save. Since this file already exists in this location, windows will ask you if you want to over write the existing file. Answer yes!

Start or Re-Start the Gate Program, Axcys!

The End!
