Axcys Wireless Alarm Transceiver

The Axcys wireless alarm transceiver is part of the Axcys wireless Unit/Door alarm and monitoring system. It works by listening and actively communicating with the wireless door contacts. Once a wireless contacts signal is received, the Transceiver replies with an acknowledgement then immediately sends the data to the Axcys Security Manager software. There your preset actions are performed.

- Long range
- Bi-Directional, two way communication
- Acknowledgements to wireless contacts
- Easy Installation
- Mounts outside
- Water resistant case
- Mount on side of building or pole
- Fused dry contact relay

One System, Total Solution
Advanced automation for a secure self storage facility
